SILITEX · EXPO READY

Fi Europe 2026 (Food ingredients Europe)

Frankfurt am Main, Germany · 17–19/11/2026

Messe Frankfurt, Ludwig-Erhard-Anlage 1, 60327 Frankfurt am Main

17–18/11 10:00–18:00 · 19/11 10:00–16:00 (09:00 for Priority / Premium / Supplier passes)

★ Silitex stand: Hall 4.1 · N56 (code 41N56)

118	40	5	0
exhibitors screened	stand briefs (27 grade A)	halls on the route	stands to confirm ⚠

How to use this pack

1. **Day route** — stands in walking order, hall by hall. Tick ☐ when visited.
2. **Stand briefs** — what the company makes, where Silitex fits, 3 opening questions, what to avoid.
3. **Grade A** = clear fit, visit first · **B** = plausible, visit if time allows.
4. ⚠ = stand not on the official list yet — check the show app / floor plan on arrival.
5. After each talk: scan the QR → **Silitex Expo** on your phone (business card, meeting notes → summary and follow-up mail).

Silitex Italy exhibits at Hall 4.1, stand N56 (41N56) — invite visitors back to the stand. Halls read from the stand codes (31D36 = hall 3.1, stand D36); 'SU' stands = start-up area in hall 5.1. Directory snapshot 28/10/2026 (1,532 exhibitors) — re-check stands in the show app. Kosher is claimed only for CPL 350, CPL 350 ET and SILIFOOD 30.

Prepared for Federica — Silitex S.r.l.
by Avshi Sapir · Sapirim — Silitex Israel · avshi@sapirim.com · +972 50 523 1042
Research date: 28/10/2026 · public sources (official exhibitor directory and the companies' own listings). Please re-check stands on the show app.

Stand briefs

1. Sudeep Nutrition (Sudeep Pharma group) · *Netherlands (listing); Indian group* B

📍 **Hall 3.0 · C71**

Makes: Subsidiary of Sudeep Pharma (established 2021) producing food and nutraceutical ingredients, building on the parent's pharma excipient business.

Angle: non-food line

Silitex fit: Mineral and excipient processing (wet precipitation, spray drying) foams; a powder antifoam (POLIFOOD 1500 S) suits dry blends.

ANTISCHIUMA 3 · SILIFOOD 3000 · POLIFOOD 1500 S

1. Do any of your precipitation or drying steps foam?
2. Would a powdered food-contact antifoam be useful in your blends?
3. Where are your plants and who buys processing aids?

Avoid: Production is mainly in India; confirm EU or Netherlands operations.

Notes / contact: _____

2. BRAINBiocatalysts (BRAIN Biotech Group) · *United Kingdom* A

📍 **Hall 3.0 · C94 · www.biocatalysts.com**

Makes: Specialty enzyme and biosolutions company combining enzyme expertise, microbiology, bioprocess development and industrial manufacturing.

Angle: fermentation process antifoam

Silitex fit: Bioprocess development and industrial enzyme manufacture need a choice of antifoam chemistries; a silicone and silicone-free range lets them test both.

CPL 2907 · CPL 350 ET · SILIFOOD 3000

1. Do you make enzymes in-house or through contract fermentation partners?
2. Which antifoam chemistries are in your process development toolbox?
3. Are you scaling any new fermentation products in 2027?

Notes / contact: _____

3. KRÖNER-STÄRKE GmbH · *Germany* A

📍 **Hall 3.0 · D8 · www.kroener-staerke.de**

Makes: Family-owned German producer (since 1900) of organic and conventional wheat starch, cold-swelling starches and flours, and proteins.

Angle: food processing antifoam

Silitex fit: Wheat starch and gluten separation foams; the organic lines may need an organic-compatible antifoam (BIOTECH: FDA, BIO).

RIMAX S · SILIFOOD 3000 · BIOTECH

1. How do you control foam in wheat starch and gluten separation?
2. Do your organic lines need organic-compatible processing aids?
3. Is purchasing handled by the plant?

Avoid: Mid-size family company: a good fit for a direct European supplier.

Notes / contact: _____

4. Lapi Gelatine S.p.A. · *Italy* A

📍 **Hall 3.0 · F43 · lapigelatine.com**

Makes: Italian producer of gelatine and collagen peptides from bovine hides, fish skin and pig skin, exported to 52 countries for pharmaceutical, food, cosmetic and nutraceutical uses.

Angle: food processing antifoam

Silitex fit: Gelatine extraction, filtration and evaporation foam heavily; food and pharma grades need food-contact antifoams.

CPL 350 · SILIFOOD 3000 · ANTISCHIUMA 3

1. Where do you need foam control: extraction, evaporation or the hydrolysis of peptides?
2. Do pharma grades limit antifoam chemistry?
3. Is a local Italian supplier an advantage for you?

Notes / contact: _____

5. Lallemand Bio-Ingredients · *Canada* A

📍 **Hall 3.0 · H32 · www.bio-lallemand.com**

Makes: Develops and produces yeast-based flavours, yeast protein, food enzymes and fermentation-derived flavours.

Angle: fermentation process antifoam

Silitex fit: Yeast, yeast protein and enzyme fermentations all need antifoam dosed into the broth. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 350 ET · CPL 2907 · SILIFOOD 30 · SILIFOOD 3000

1. Which of your plants make yeast protein, and how is foam controlled there?
2. Do your enzyme lines have restrictions on silicone carry-over?
3. Do you need kosher-certified processing aids?

Avoid: Large private group with global procurement.

Notes / contact: _____

6. Serum Italia S.p.A. · *Italy* A

📍 **Hall 3.0 · H106 · www.serumitalia.it**

Makes: Supplies whey protein concentrate and other whey derivatives from selected fresh-cheese whey to sports nutrition, dairy and food customers.

Angle: food processing antifoam

Silitex fit: An Italian whey processor is a natural short-supply-chain customer for food-grade simethicone antifoams.

SILIFOOD 30 · SILIFOOD 2500 · POLIFOOD 1500 S

1. What antifoam do you use in whey concentration and drying?
2. Do your customers require kosher-certified processing aids?
3. Would a local Italian supplier simplify logistics for you?

Notes / contact: _____

7. Arla Foods Ingredients · *Denmark* A

📍 **Hall 3.0 · J94 · www.arlafoodsingredients.com**

Makes: Whey-based ingredients for functional, health and performance nutrition (high-protein foods, clear protein beverages, whey permeate).

Angle: food processing antifoam

Silitex fit: Whey processing (ultrafiltration, evaporation, spray drying) foams heavily; simethicone emulsions suit dairy. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

SILIFOOD 30 · SILIFOOD 2500 · POLIFOOD 1500 S

1. Where in whey fractionation do you need foam control?
2. Are kosher and halal mandatory on processing aids?
3. Which site evaluates new antifoams?

Avoid: Large cooperative group; stringent qualification.

Notes / contact: _____

8. Eurovo · *Italy* B

📍 **Hall 3.0 · K8 · www.eurovo.com**

Makes: Italian company with over 50 years in eggs and egg products, running a fully integrated, traceable production chain.

Angle: food processing antifoam

Silitex fit: Egg breaking, pasteurisation and egg-powder drying generate foam.

SILIFOOD 30 · SILIFOOD 2500

1. Where does foam affect your egg-product lines?
2. Do you need kosher-certified processing aids?
3. Who handles processing aids at your plants?

Notes / contact: _____

9. Prolactal · *Austria* B

📍 **Hall 3.0 · K86 · www.prolactal.com**

Makes: Austrian producer of dairy ingredients from organic cow and goat milk and whey for advanced nutrition.

Angle: food processing antifoam

Silitex fit: Organic dairy and whey processing still needs approved antifoams in evaporation and drying.

SILIFOOD 30 SILIFOOD 2500

1. Do organic rules restrict which antifoams you can use?
2. Where does foam limit throughput in your plant?
3. Who approves processing aids?

Avoid: Organic certification may limit silicone use; check first.

Notes / contact: _____

10. Fuji Oil Europe · *Belgium* B

📍 **Hall 3.1 · A21 · www.fujioileurope.com**

Makes: Specialty fats for food: plant-based oils and fats, chocolate fillings and coatings (filling fats, CBEs, coating fats, milk-fat replacers) and soluble fibre.

Angle: release / processing aid

Silitex fit: Fat processing and soluble-fibre (soy) extraction lines may need antifoams for oily or aqueous media.

SILIFOOD 1000 SILIFOOD 100 FLUIDO DI SILICONE 5 - 2,000,000 cSt

1. Is there foam in your soluble-fibre or fat-processing lines?
2. Do your confectionery customers ask you about release or anti-stick solutions?
3. Is purchasing handled in Belgium or by the Japanese parent?

Avoid: No food-grade release agent in the catalogue; lead with antifoams.

Notes / contact: _____

11. Leiber GmbH · *Germany* A

📍 **Hall 3.1 · A38 · www.leibergmbh.de**

Makes: Refines brewers' yeast into products for human and animal nutrition, with in-house research laboratories.

Angle: fermentation process antifoam

Silitex fit: Debittering, autolysis and drying of brewers' yeast foam; a kosher, FDA vegetal compound fits the food and feed lines.

CPL 350 ET SILIFOOD 30 POLIFOOD 1500 S

1. Which processing steps foam most on brewers' yeast?
2. Do the feed and food lines use the same antifoam?
3. Is purchasing local or through the Asahi group?

Avoid: Shares stand 31A38 with Asahi Group Foods (same group); purchasing may be at group level.

Notes / contact: _____

12. Amano Enzyme · *United Kingdom (listing); Japanese group* A

📍 **Hall 3.1 · B38 · www.amano-enzyme.com**

Makes: Enzyme producer with over 120 years in enzyme science; says it is the world's number one non-GM enzyme producer, serving dairy, dairy alternatives and other food uses.

Angle: fermentation process antifoam

Silitex fit: Non-GM enzyme fermentation needs antifoams with clean food-contact status. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 2907 CPL 350 ET SILIFOOD 30

1. Do your European operations ferment locally or import enzymes from Japan?
2. What antifoam constraints apply to your non-GM and kosher claims?
3. Would you evaluate a vegetal antifoam in a pilot fermenter?

Avoid: Production may be outside Europe; check the decision point first.

Notes / contact: _____

13. Bioprox Cultures · *France* A

📍 **Hall 3.1 · C14 · www.bioprox.com**

Makes: French producer of freeze-dried lactic cultures for dairy and plant-based applications, with over 50 years of experience.

Angle: fermentation process antifoam

Silitex fit: Producing lactic cultures means fermenting biomass before concentration and freeze-drying, and foam control with food-safe antifoam is needed. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 350 ET · SILIFOOD 30 · CPL 2907

1. Which antifoam do you use in culture propagation today?
2. Do your plant-based cultures need vegetal, non-silicone processing aids?
3. Who decides on processing aids at your plant?

Notes / contact: _____

14. Unigrà S.p.A. · *Italy* B

📍 **Hall 3.1 · D6 · www.unigra.it**

Makes: Italian maker of vegetable fats and oils, margarines, UHT plant-based toppings, ice-cream bases, pastes and chocolate/compounds; five plants (three in Italy).

Angle: release / processing aid

Silitex fit: Anhydrous E900 silicones (SILIFOOD 100/1000) are designed for oily media; check PDMS fluids for release and processing in their bakery and confectionery lines.

SILIFOOD 1000 · SILIFOOD 100 · FLUIDO DI SILICONE 5 - 2,000,000 cSt

1. Do you use antifoam in oil processing or the topping and whipping lines?
2. Do you supply release oils to bakery customers, and what is in them?
3. Who in R&D evaluates additive suppliers?

Avoid: The catalogue has no food-certified bakery release agent; FLUIDO DI SILICONE is food-contact only on selected viscosities, so confirm the grade before offering it.

Notes / contact: _____

15. Ohly GmbH (ABF Ingredients stand) · *Germany* A

📍 **Hall 3.1 · D20 · www.ohly.com**

Makes: Supplies multifunctional yeast derivatives and culinary powders based on natural baker's and torula yeast to food, biotech, human-health and animal-health markets.

Angle: fermentation process antifoam

Silitex fit: Torula and baker's yeast fermentation, autolysis and spray-drying of yeast extracts all foam. CPL 350 ET (kosher, FDA) targets yeast manufacturing.

CPL 350 ET · CPL 2907 · SILIFOOD 30 · POLIFOOD 1500 S

1. Where is foam control hardest: fermentation, autolysis or evaporation?
2. Are you open to qualifying a European second-source antifoam?
3. Which certifications must a processing aid have (kosher, halal, FDA, organic)?

Avoid: Part of ABF Ingredients, which may run group supply contracts.

Notes / contact: _____

16. AB Enzymes GmbH (ABF Ingredients stand) · *Germany* A

📍 **Hall 3.1 · D20 · www.abenzymes.com**

Makes: Enzyme solutions for baking, protein modification, fruit processing and pulp & paper, among other industries.

Angle: fermentation process antifoam

Silitex fit: Enzymes are made by submerged microbial fermentation, where antifoam dosage and how it affects downstream filtration both matter.

CPL 2907 · CPL 350 ET · SILIFOOD 3000

1. Which antifoam types are validated in your fermentation and recovery steps?
2. Does silicone affect your ultrafiltration membranes?
3. Who owns processing-aid qualification: R&D or production?

Avoid: ABF Ingredients group; confirm site-level purchasing.

Notes / contact: _____

17. Avebe · *Netherlands* A

📍 **Hall 3.1 · D36 · www.avebe.com**

Makes: Dutch farmer cooperative (more than 2,000 members) making potato starch and a range of other potato-derived products.

Angle: food processing antifoam

Silitex fit: Potato starch and potato protein isolation runs on large foaming process-water streams.

RIMAX S | SILIFOOD 3000 | CPL 350

1. Which antifoam types are used in starch and protein recovery today?
2. Is there a sustainability push toward vegetal antifoams?
3. When is your next processing-aid review?

Avoid: Cooperative with long-standing supplier relationships.

Notes / contact: _____

18. Cosun Beet Company (Royal Cosun stand) · *Netherlands* A

📍 **Hall 3.1 · D46 · www.cosunbeetcompany.com**

Makes: Sugar beet processor (formerly Suiker Unie) making sugar and sugar specialities and turning all parts of the beet into natural ingredients.

Angle: food processing antifoam

Silitex fit: Sugar factories use antifoams in beet washing and diffusion during every campaign.

RIMAX S | RIMAX 1000 S | DYNAPAN 30 F

1. Which antifoam types do you use in beet washing and diffusion?
2. Is the antifoam tender annual, before each campaign?
3. Do you need a silicone-free option for any side streams?

Avoid: Supply probably contracted per campaign; timing matters.

Notes / contact: _____

19. AGRANA Group · *Austria* A

📍 **Hall 3.1 · D80 · www.agrana.com**

Makes: Austrian group turning agricultural raw materials into industrial products; segments include sugar, starch and fruit.

Angle: food processing antifoam

Silitex fit: Sugar campaigns, potato and maize starch processing, and fruit preparations all need antifoam.

RIMAX S | RIMAX 1000 S | SILIFOOD 1600 | DYNAPAN 30 F

1. Which division has the biggest foam problem: sugar, starch or fruit?
2. Is antifoam bought centrally or per site?
3. Is there interest in silicone-free options for bioethanol or starch side streams?

Avoid: Shares stand 31D80 with Austria Juice; one visit covers both.

Notes / contact: _____

20. AUSTRIA JUICE GmbH · *Austria* A

📍 **Hall 3.1 · D80**

Makes: AGRANA subsidiary; a leading maker of fruit-juice concentrates, beverages and flavour concepts.

Angle: food processing antifoam

Silitex fit: Fruit washing, pressing and juice concentration foam; SILIFOOD 1600 and RIMAX S are positioned for fruit washing.

SILIFOOD 1600 | DYNAPAN 16 F | RIMAX S

1. Where do you dose antifoam: washing, pressing or evaporation?
2. Do you need kosher-certified processing aids for juice exports?
3. Is supply set by AGRANA group or locally?

Avoid: AGRANA group purchasing may apply.

Notes / contact: _____

21. Biospringer by Lesaffre (Lesaffre group stand) · *France* A

📍 **Hall 3.1 · G46 · www.biospringer.com**

Makes: Yeast extracts and other natural-fermentation solutions for food manufacturers; part of Lesaffre, which has worked in fermentation since 1853.

Angle: fermentation process antifoam

Silitex fit: Yeast-extract production (fermentation, autolysis, evaporation) needs constant foam control; offer a kosher, FDA vegetable compound or a silicone-free route. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 350 ET | CPL 2907 | SILIFOOD 30 | SILIFOOD 1000

1. Which steps foam most for you: propagation, autolysis or concentration?
2. Would a silicone-free, 100% vegetal antifoam help your clean-label positioning?
3. Is antifoam bought per plant or through Lesaffre group purchasing?

Avoid: Global group with an established antifoam supply base: position as a second source for a single site.

Notes / contact: _____

22. Emsland Group · *Germany* A

📍 **Hall 3.1 · H20 · www.emsland-group.com**

Makes: Founded in 1928, makes plant-based products for food, animal-nutrition and technical uses (potato and pea starches, proteins and fibres).

Angle: food processing antifoam

Silitex fit: Potato starch and protein recovery from potato fruit juice is one of the foamiest food processes.

RIMAX S | SILIFOOD 3000 | CPL 350

1. How do you control foam in potato fruit-juice and protein recovery?
2. Do you need a non-silicone option for the protein streams?
3. Who qualifies new processing aids?

Notes / contact: _____

23. Tereos · *France* A

📍 **Hall 3.1 · H90 · www.tereos.com**

Makes: Cooperative processing beet, sugarcane, cereals and alfalfa through 41 industrial sites in 15 countries.

Angle: food processing antifoam

Silitex fit: Beet washing, diffusion and juice purification, and starch wet-milling, are classic foam points; RIMAX S/1000 S are positioned for sugar manufacturing and beet washing.

RIMAX S | RIMAX 1000 S | DYNAPAN 30 F | SILIFOOD 1600

1. Which steps foam most in your beet campaign: washing, diffusion or carbonatation?
2. Do you split antifoam tenders by sugar and starch sites?
3. When does your next processing-aid tender open?

Avoid: Big group with tender-based supply; aim for a site trial or second-source slot.

Notes / contact: _____

24. Angel Yeast Co., Ltd · *China* A

📍 **Hall 3.1 · K80**

Makes: Listed Chinese yeast company (founded 1986) mass-producing yeast and yeast derivatives, with twelve factories and a major yeast-extract business.

Angle: fermentation process antifoam

Silitex fit: Yeast propagation and yeast-extract fermentation is foam-heavy; CPL 350 ET is positioned by Silitex specifically for yeast manufacturing. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 350 ET | CPL 2907 | SILIFOOD 30 | SILIFOOD 1000

1. Which antifoam chemistry do you run in propagation today: vegetable, polyglycol or silicone?
2. Do your European or export plants require kosher or halal antifoams?
3. Who qualifies processing aids: plant QA or central procurement?

Avoid: Large group, likely with locked central supply and domestic sourcing; aim at a specific plant or export line, not the whole group.

Notes / contact: _____

25. Pfeifer & Langen GmbH & Co. KG · *Germany* A

📍 **Hall 3.1 · M31 · www.pfeifer-langen.com/en**

Makes: One of Europe's leading sugar producers (since 1870; Diamant and Kölner Zucker brands), turning sugar beet into sugar products at sites across Europe.

Angle: food processing antifoam

Silitex fit: Beet sugar processing is a core antifoam application named in the RIMAX product pages.

RIMAX S | RIMAX 1000 S | DYNAPAN 30 F

1. Where do you see the most foam: washing, diffusion or evaporation?
2. Do you want polymer-based or silicone antifoams in sugar processing?
3. Who manages processing-aid tenders across your plants?

Notes / contact: _____

26. iprona (Iprona Lana S.p.A.) · *Italy* A

📍 **Hall 3.1 · N38 · www.iprona.com**

Makes: Family fruit-processing business (since 1923) making juices, purées, concentrates and custom blends for the food and beverage industry.

Angle: food processing antifoam

Silitex fit: Fruit washing, pressing and concentration foam, and an Italian food-grade antifoam maker is a natural local partner.

SILIFOOD 1600 | DYNAPAN 16 F | RIMAX S

1. Where is foam a problem: washing, pressing or concentration?
2. Do you need kosher processing aids for exports?
3. Who handles purchasing for your Italian and foreign sites?

Notes / contact: _____

27. Roquette · *France* A

📍 **Hall 4.1 · A53 · www.roquette.com**

Makes: Plant-based ingredient group with over 90 years in food (starches, polyols, plant proteins).

Angle: food processing antifoam

Silitex fit: Wet milling, plant-protein extraction and polyol fermentation all need antifoam.

RIMAX S | SILIFOOD 3000 | CPL 2907 | CPL 350 ET

1. Which plants or processes would consider a second-source antifoam?
2. Is there a European plant-protein line with foam issues?
3. Who in central procurement handles processing aids?

Avoid: Very large group with global supply agreements; aim for a niche or second-source position.

Notes / contact: _____

28. Solar Foods · *Finland* B

📍 **Hall 4.1 · A62 · www.solarfoods.com**

Makes: Produces Solein, a protein made from a natural, non-modified single-cell organism, for the food industry.

Angle: fermentation process antifoam

Silitex fit: Continuous gas fermentation of single-cell protein needs dependable foam control as the factory scales.

CPL 2907 | CPL 350 ET | SILIFOOD 30

1. How is foam managed in your gas-fermentation reactors?
2. Which antifoam chemistries are acceptable in Solein's regulatory dossiers?
3. Are you qualifying suppliers for scale-up?

Avoid: Novel-food dossier may lock in specific processing aids; ask before pitching a switch.

Notes / contact: _____

29. Clarebout Potatoes · *Belgium* B

📍 **Hall 4.1 · F40 · www.clarebout.com**

Makes: Belgian family business, one of the largest producers of frozen potato products for private labels.

Angle: food processing antifoam

Silitex fit: Potato washing, cutting-water and blanching foam, and frying oil foams too; anhydrous E900 silicone is used in oily media.

SILIFOOD 1000 · SILIFOOD 100 · RIMAX S

1. Do you dose antifoam into frying oil or the potato process water?
2. Which antifoam do you use today, and who supplies it?
3. Is purchasing centralised across your plants?

Avoid: Check EU additive rules for E900 in frying oils for their product category before quoting.

Notes / contact: _____

30. Cereal Docks S.p.A. · *Italy* B

📍 **Hall 4.1 · M46 · www.cerealdocks.it/en**

Makes: Italian industrial group doing primary processing of agricultural raw materials, making ingredients from soybean, sunflower, rapeseed, cereals and pulses.

Angle: food processing antifoam

Silitex fit: Oilseed crushing, degumming and lecithin or protein lines involve foaming oil and water phases; anhydrous E900 silicones suit oily media.

SILIFOOD 1000 · SILIFOOD 100 · BIOTECH

1. Do you have foam problems in oil refining, lecithin or protein lines?
2. Do your organic lines need organic-compatible antifoams?
3. Who buys processing aids for your plants?

Notes / contact: _____

31. NIZO Food Research (incl. Biotechnology Fermentation Factory Ede) · *Netherlands* A

📍 **Hall 4.1 · S18 · www.nizo.com**

Makes: Independent contract research and manufacturing organisation for food and health; runs what it calls Europe's largest open-access, food-grade pilot and scale-up plant.

Angle: fermentation process antifoam

Silitex fit: A contract fermentation and scale-up plant runs many client processes and needs a range of food-grade antifoams in stock.

CPL 350 ET · CPL 2907 · SILIFOOD 30 · SILIFOOD 3000

1. Which antifoams do you keep on hand for client fermentations?
2. Do clients specify antifoam, or do you choose?
3. Would a sample kit (silicone, vegetal, alcohol-based) help your pilot team?

Notes / contact: _____

32. Advanced Enzyme Technologies Ltd · *India* A

📍 **Hall 4.2 · N8 · www.advancedenzymes.com**

Makes: Indian producer of enzymatic solutions for food, nutrition and other industries.

Angle: fermentation process antifoam

Silitex fit: An enzyme maker with its own fermentation is a direct antifoam consumer; kosher and FDA status can help export-oriented plants.

CPL 2907 · CPL 350 ET · SILIFOOD 3000

1. Which fermentation scale do you run (solid-state or submerged)?
2. What antifoam do you use now, and is local supply a pain point?
3. Do your customers ask for kosher or halal on the processing aids?

Avoid: Indian plants may favour local suppliers on cost; qualify volume and logistics first.

Notes / contact: _____

33. Biolev by Levapan · *Colombia* A

📍 **Hall 4.2 · P28 · www.levapan.com**

Makes: Multi-Latin company founded in 1956 producing yeast, yeast extracts and flavour enhancers, plus raw materials for bakery and food.

Angle: fermentation process antifoam

Silitex fit: A yeast and yeast-extract producer is the textbook user for CPL 350 ET (kosher, FDA, positioned for yeast manufacturing).

CPL 350 ET | CPL 2907 | SILIFOOD 30 | SILIFOOD 1000

1. Which antifoam do you run in yeast propagation now?
2. Do you import processing aids from Europe?
3. Would kosher certification help your export customers?

Avoid: Plants are in Latin America; confirm whether a European supplier can serve them.

Notes / contact: _____

34. PURIS · *United States* B

📍 **Hall 5.1 · A104 · www.puris.com**

Makes: US producer of non-GMO pea proteins and other pulse ingredients, built over nearly 40 years.

Angle: food processing antifoam

Silitex fit: Pea protein wet extraction and isoelectric precipitation foam; BIOTECH and CPL 350 target vegetable extracts.

BIOTECH | CPL 350 | SILIFOOD 30

1. How do you control foam in pea protein extraction?
2. Do you require non-silicone or organic-compatible antifoams?
3. Do you have European production or partners?

Avoid: Production is in the US; a European supplier needs a logistics case.

Notes / contact: _____

35. Acetum S.p.A. · *Italy* B

📍 **Hall 5.1 · B108 · www.acetum.it**

Makes: World's leading producer of Balsamic Vinegar of Modena PGI, also serving private label, industrial and food-ingredient customers from Modena.

Angle: fermentation process antifoam

Silitex fit: Acetification and concentration of grape must can foam; an Italian food-grade antifoam supplier is a natural fit.

CPL 2907 | SILIFOOD 30

1. Do you have foam issues in acetification or must concentration?
2. Do PGI or organic rules limit which processing aids you can use?
3. Who buys processing aids: plant or group?

Avoid: PGI or organic rules may restrict processing aids; check before proposing silicone.

Notes / contact: _____

36. Bioiberica · *Spain* B

📍 **Hall 5.1 · C69 · www.bioiberica.com**

Makes: Life-science company making biologically valuable molecules for pharma, nutraceutical and food; a leader in the API heparin.

Angle: non-food line

Silitex fit: Extraction and purification of biological molecules (heparin, chondroitin, collagen) foam; ANTISCHIUMA 3 and SILIFOOD 3000 are described for pharma use.

ANTISCHIUMA 3 | SILIFOOD 3000 | CPL 2907

1. Where does foam affect your extraction and purification?
2. What regulatory documents do you need from an antifoam supplier for API processes?
3. Who approves processing aids at your plants?

Avoid: API (pharma) processes need GMP documentation; confirm what Silitex can provide.

Notes / contact: _____

37. Jungbunzlauer International AG · *Switzerland* A

📍 **Hall 5.1 · D8 · www.jungbunzlauer.com**

Makes: Producer of ingredients from natural sources (texturants, acidulants, minerals) for food, nutrition, health, home and personal care; headquartered in Basel.

Angle: fermentation process antifoam

Silitex fit: Citric acid, xanthan and other fermentation products are high-volume, foam-intensive processes.

CPL 2907 CPL 350 ET SILIFOOD 3000

1. Which of your fermentations (citric, xanthan, gluconates) is most foam-critical?
2. Is antifoam contracted centrally or per plant (Austria, France, Canada)?
3. Would a kosher-certified vegetal antifoam fit your label commitments?

Avoid: Large, mature fermenter: expect strict qualification and established suppliers.

Notes / contact: _____

38. Fufeng Group · *China* A

📍 **Hall 5.1 · D57**

Makes: HKEx-listed bio-fermentation manufacturer of amino acids (L-valine, L-leucine, L-glutamine, L-arginine, L-tryptophan), MSG, xanthan gum and gellan gum, hyaluronic acid and other products.

Angle: fermentation process antifoam

Silitex fit: Very large amino-acid, MSG and xanthan fermentation volumes make heavy antifoam use.

CPL 2907 CPL 350 ET SILIFOOD 1000

1. Do you buy antifoams for any non-Chinese production sites?
2. Which antifoam types do you use in amino-acid fermentation?
3. Are kosher or halal processing aids required for your exports?

Avoid: Huge Chinese producer that probably sources antifoam domestically on price; a lead for a niche or certified grade at most.

Notes / contact: _____

39. Meihua Group · *China* B

📍 **Hall 5.1 · F86**

Makes: Global provider of amino-acid nutrition and health solutions, supplying clients in over 100 countries; founded in 2002.

Angle: fermentation process antifoam

Silitex fit: Amino-acid fermentation is an antifoam-intensive process.

CPL 2907 CPL 350 ET

1. Do any of your plants buy imported antifoams?
2. Are certified (kosher, halal) processing aids required?
3. Who evaluates new processing aids?

Avoid: Same caution as Fufeng: domestic supply and price-driven.

Notes / contact: _____

40. Formo Foods GmbH · *Germany* B

📍 **Hall 5.1 · SU82 · www.formo.bio**

Makes: Makes casein and other enhanced proteins by precision fermentation for food and nutrition.

Angle: fermentation process antifoam

Silitex fit: Precision-fermentation scale-up runs into foam early, and antifoam must not interfere with protein recovery. CPL 350 ET and SILIFOOD 30 carry kosher certificates on silitex.it.

CPL 2907 CPL 350 ET SILIFOOD 30

1. Are you fermenting in-house or with a CMO, and at what scale?
2. Does antifoam carry-over affect your casein purification?
3. Are you still choosing processing aids for commercial scale?

Avoid: Start-up volumes; long-term upside rather than immediate tonnage.

Notes / contact: _____

Additive competitors exhibiting — know where they are

- **MÜNZING CHEMIE GmbH** — Hall 3.0 · A50 — Germany; MAGRABAR antifoams, defoamers and release agents for the food industry (direct competitor).
- **Caldic** — Hall 4.1 · K6 — Netherlands distributor; lists anti-foaming agents among its food products.
- **Capol** — Hall 4.2 · L22 — German maker of anti-sticking, release, glazing and polishing agents for confectionery.
- **Dolkem Kimya** — Hall 4.2 · J14 — Turkish maker of glazing, polishing and release agents and release oils/waxes.
- **Prozas Dis Ticaret Ltd Sti** — Hall 3.1 · M84 — Turkish supplier listing pan oil and pan release agents, plus sorbitan esters.
- **Bakearts Endüstriyel Gida ve Sanayi Ltd. Sti (Tavamax)** — Hall 4.2 · G20 — Turkish release-agent producer (Tavamax brand) for bakery.
- **SACMAR SRL** — Hall 4.2 · F8 — Italian food-solutions supplier whose range includes release agents, emulsifiers and whipping agents.
- **Stearinerie Dubois** — Hall 3.1 · C42 — French maker of fatty esters, processing aids and coating solutions for food.
- **BRATA–WOLF CANYON GROUP** — Hall 3.1 · M8 — Trading group listing antifoaming agents among many food additives.

Also screened

- **Biotechnology Fermentation Factory Ede BV** — Hall 4.1 · S18 — NIZO's fermentation facility in Ede; see the NIZO brief (same stand).
- **Asahi Group Foods, Ltd.** — Hall 3.1 · A38 — Fermentation-based food ingredients (yeast extract); same stand as Leiber.
- **MCLS (Mitsubishi Corporation Life Science) Europe** — Hall 3.0 · H96 — Japanese-rooted portfolio incl. specialty yeast extracts; mostly a trader, so the need sits with its plants.
- **The Protein Brewery** — Hall 4.2 · L54 — Fermentation-derived protein ingredients (Breda, NL); start-up scale.
- **ProteinDistillery** — Hall 4.1 · A67 — Food-tech start-up making proteins with microorganisms.
- **Promyc** — Hall 3.0 · F26 — Mycoprotein produced by fermentation.
- **Moa Foodtech** — Hall 4.1 · K56 — AI-led biomass fermentation start-up; early stage.
- **Pentasweet UAB** — Hall 4.1 · G35 — Developing a fermentation-made sweet protein; pre-commercial.
- **FERMENTALG** — Hall 3.1 · D13 — Microalgae and microorganism-based biosolutions made by fermentation.
- **CJ Europe GmbH** — Hall 4.2 · G4 — European arm of the CJ group (amino acids and nucleotides by fermentation); global group supply is likely locked.
- **Ajinomoto Foods Europe** — Hall 3.1 · D79 — Food products arm; group fermentation is mostly outside Europe.
- **Shijiazhuang Haitian Amino Acid Co., Ltd** — Hall 3.0 · N75 — Chinese amino-acid producer; likely buys domestic antifoam on price.
- **Chenguang Biotech Group** — Hall 3.0 · J20 — Chinese plant-extract maker (not fermentation); low foam need.
- **Interstarch** — Hall 3.1 · K108 — 40+ corn and wheat products incl. native and modified starches (Czech Republic).
- **Tiba Starch & Glucose Manufacturing Co.** — Hall 3.1 · K90 — Egyptian starch and glucose producer.
- **Egyptian Starch and Glucose Manufacturing** — Hall 4.2 · P50 — Egyptian starch and glucose producer.
- **SANGUAN WONGSE STARCH Co.,Ltd.** — Hall 5.1 · B71 — Thai tapioca starch; far from European supply.
- **SUCREN** — Hall 3.1 · D63 — Sugar trading and specialities; limited processing on site.
- **Bio Kartoffel Nord** — Hall 4.1 · B50 — Organic potato processing (Germany); organic rules may limit antifoam choice.
- **FrieslandCampina Ingredients** — Hall 3.1 · G38 — Dairy and whey ingredients; large group with central purchasing.
- **Lactalis Ingredients** — Hall 3.0 · F23 — Milk and whey ingredients; large group with central purchasing.
- **Sachsenmilch Leppersdorf GmbH** — Hall 3.0 · D50 — Large German milk and whey plant (Müller group).
- **MEGGLE Food Ingredients** — Hall 3.0 · G1 — Lactose and dairy ingredients.
- **Lactoprot** — Hall 3.0 · H26 — Dairy proteins and milk ingredients (Austria).
- **DAIRYGOLD Food Ingredients** — Hall 4.1 · M21 — Irish dairy ingredients.
- **Tatua Co-operative Dairy Company** — Hall 3.0 · N59 — New Zealand dairy; outside Europe.
- **Inalpi spa** — Hall 5.1 · B8 — Italian short-supply-chain dairy (milk powder, butter).
- **EURIAL I&N** — Hall 3.0 · D43 — French dairy ingredients.
- **INGREDIA SA** — Hall 3.1 · D15 — French dairy proteins.

- **Lactosan A/S** — Hall 4.1 · G6 — Cheese powders; limited foaming.
- **Glanbia** — Hall 3.1 · K64 — Whey and nutrition ingredients; large group.
- **PROWICO GmbH** — Hall 3.1 · C6 — German animal proteins (hydrolysed gelatine and collagen to functional proteins).
- **Essentia Protein Solutions** — Hall 3.1 · C6 — Animal-derived functional proteins; broth processes (CPL 350 fit).
- **Sonac by Darling Ingredients** — Hall 3.1 · G2 — Animal proteins and fats for meat and savoury; group purchasing.
- **Rousselot BV** — Hall 3.1 · G56 — Collagen and gelatine leader (Darling group); group purchasing.
- **GELITA AG** — Hall 3.1 · H38 — Collagen peptides and gelatines; extraction foams, but a large group.
- **Ewald-Gelatine GmbH** — Hall 3.0 · C34 — German gelatine producer.
- **Organic Plant Protein A/S** — Hall 4.1 · F8 — Organic plant proteins; organic rules may restrict antifoam.
- **Happy Plant Protein Oy** — Hall 3.0 · J90 — Finnish plant protein start-up.
- **Sunbloom Proteins** — Hall 3.1 · L63 — Sunflower protein start-up.
- **Herbstreith & Fox KG** — Hall 4.2 · M6 — Pectin and fibre extraction (foaming acid extraction).
- **JRS SILVATEAM INGREDIENTS S.r.l.** — Hall 3.1 · H96 — Italian plant-based ingredients (tannins, fibres).
- **Hispanagar S.A.** — Hall 4.1 · G58 — Agar extraction; niche.
- **Hardeman Egg Group** — Hall 5.1 · B24 — Egg products (NL).
- **Abafoods S.r.l.** — Hall 5.1 · A86 — Italian organic plant-based (rice and oat) drinks; organic rules apply.
- **SOUFFLET MALT** — Hall 3.0 · M20 — Malting; limited antifoam need.
- **Boortmalt** — Hall 4.1 · C6 — Malting; limited antifoam need.
- **Crespel & Deiters / Loryma** — Hall 3.1 · A20 — Wheat-based functional ingredients (starch and gluten processing).
- **Givaudan** — Hall 3.1 · K36 — Flavours; global supply locked.
- **Prinova** — Hall 3.1 · G32 — Ingredient distributor.
- **ROYAL INGREDIENTS GROUP** — Hall 3.1 · G35 — Ingredient trader.
- **Aarti Pharmalabs Limited** — Hall 4.2 · N67 — Indian API developer; far from Silitex supply.
- **MPI NutriPharma BV** — Hall 3.0 · A71 — Nutraceutical ingredients.
- **GOPACK BV / FLEXIPOL PACKAGING** — Hall 4.1 · P24 — Industrial packaging; possible IDROCER (BfR/FDA food packaging) lead only if they coat in-house.
- **Bunge** — Hall 3.1 · H6 — Oils; global group with locked supply.
- **Cargill** — Hall 3.1 · H80 — Global group with locked supply.
- **BENEO** — Hall 3.1 · G70 — Südzucker group functional ingredients; group purchasing.
- **dsm-firmenich** — Hall 4.1 · A57 — Global group with locked supply.
- **Ingredion UK Limited** — Hall 3.1 · K4 — Global group with locked supply.
- **Advanced Biotech Europe GmbH** — Hall 3.0 · C58 — Flavour chemicals trader.
- **3A Biotech SL** — Hall 4.1 · M45 — Spanish ingredients; unclear processing.
- **Viablife Biotech** — Hall 5.1 · B81 — Small biotech; unclear fermentation scale.
- **Yeastime** — Hall 5.1 · SU94 — Yeast-based start-up (startup area).
- **PFx Biotech** — Hall 5.1 · SU67 — Portuguese precision-fermentation start-up.
- **STANDING OVATION** — Hall 5.1 · SU50 — French precision-fermentation casein start-up.
- **BioGrowing Probiotics** — Hall 4.1 · M74 — Probiotic strain fermentation (China-based group).
- **Mycotrition GmbH** — Hall 3.0 · C45 — Mushroom mycelium products; small scale.
- **Time-travelling Milkman** — Hall 4.2 · L54 — Dairy-fat alternative start-up.
- **Planetary** — Hall 4.2 · L54 — Swiss precision-fermentation CDMO start-up.
